

Chocolate Sales

This is a guided project done with the help of Mr.Chandoo who runs a youtube channel <https://www.youtube.com/@chandoo>.

Data is also provided by Mr.Chandoo. We have created an interactive dashboard using PowerBi Desktop.

The Final Dashboard Depicts the KPIs:

- Total Sales
- Total Profit
- Total Boxes Sold
- Total Cost
- Total Shipments

We have created many new measures and done some data modeling in this project. Visual tools like New-Slicer and New-Cards are used in this project. The Dashboard is very Self explanatory in itself.

The impressive thing in this project is that I learned to use Selectors and Bookmark to Hide and show the data based on a self made image that is being used as a filter.
